Okay – found this.

GSFLOW DLLs compilation

The DLL for the couple code need to be compiled with static flag. They can be debug or release, but need that flag to be interpreted correctly in C# with the correct type of library.

We manually added the flag indicated by the red arrow to the compile arguments and it seems to have worked for Enrique:

Thanks,

Enrique T.

Subject: RE: [EXTERNAL] RE: New DLL for you to try

Replaced the file and it did not work, unfortunately. I did a quick search on fortran and did not find much on my local notes...

Thanks,

Enrique T.

Okay, that commit seem to have a dll file with a different name the project expects a MODSIM_GSFLOW.dll file. I can change the name and push that change.

Thanks,

Enrique T.
